

FVN Research

Publication and Storage Guide

How to store, publish, and present Archive 001.

Public package

The sanitized public package should be the distribution surface. It includes public documentation, final reports, schema summaries, lineage map, release checklist, reproducibility indexes, manifest, exclusions, and sanitization checks.

Do not publish

- Raw SEC filings or raw price files.
- Intermediate feature, source-table, target, model, or portfolio datasets.
- Execution logs, private runtime artifacts, or local credentials.
- Nested ZIP archives inside the publication package.

Store in library

- Latest full repository ZIP: final-archive-freeze-v0.
- Sanitized publication package ZIP.
- Reproducibility pack ZIP.
- Final archive release metadata JSON.
- Frozen audit manifest JSON.
- This PDF release kit.

Narrative positioning

The public narrative should be: Archive 001 establishes the FVN Library standard for reproducible quant research. It is a serious research framework with audit controls, not a casual backtest screenshot.
